SwampMash

Colin Clark, Kaylee Bleeker, Luna Khan, Seamus Hinz

Version: 1.0

Overview

Welcome to Swamp Mash, an interactive, fast-paced puzzle game set right here, in THE SWAMP. Deep in the swamp, Albert the gator is prepping for the big game, but he's hungry. It's up to you as the player to help him gather ingredients for his southern swamp gumbo by merging animal tiles before time runs out.

Game Description

Objective

Your goal is to merge tiles adjacent to one another to increase your score. Create matches with 3 or more identical animals, and the larger the size of your merge, the more points earned! You must reach the target score before time runs out to complete the Level Mode, or survive as long as possible in Endless Mode.

Albert is counting on you!

Gameplay

Once the user enters the game, they will be presented with a grid of various animals. By left clicking on one of the animals, they will select that animal tile. The player can then use one of the arrow keys to swap that tile with the tile in that arrow's direction. The swap will not happen if there is no tile selected or there are no tiles in the direction of the arrow. When three or more of the same animals are lined up, the line of animals will disappear and new tiles will drop down from the top of the screen.

Controls

To navigate the menu, only the left click is used. Hover your mouse over each button and click to select the button. Level and Endless modes are on the top row of buttons and bring the player into gameplay. How to Play and Highscore are located on the bottom row of buttons and open up submenus. Submenus can be exited simply by clicking the screen.

Assets Used

- Images: **all images** used were drawn by hand and created by group members.
    - Animal Icons: Luna Khan
    - Background Images and Menu Screen Albert Icon: Kaylee Bleeker

List of the images you used in your game and where you got them

1. Swamp Menu Background: *menu_background.png*
    a. Contains the title "Swamp Mash" and is used in the game's main menu
2. Swamp Game background: *background.png*
    a. Used as a backdrop in the game during gameplay
3. Albert the Gator: *albert.png*

        a. Used as an icon for the opening main menu screen

Animal Icons: Used for the game's interactive animal tiles during gameplay.

4. Beaver: *beaver.png*
5. Dragonfly: *dragonfly.png*
6. Fish: *fish.png*
7. Frog: *frog.png*
8. Razorback (Wild Hog): *razorback.png*
9. Shoebill Bird: *shoebill.png*
10. Snake: *snake.png*
11. Turtle: *turtle.png*

- Sound files

        - used as MenuMusic.wav
    - https://opengameart.org/content/ui-sound-effects-pack
        - Used Menu1Select.wav
        - Used Menu1Back.wav

User Menu

The main menu contains four buttons that can be clicked. Clicking the green button starts the level mode, the red button starts the endless mode, the yellow button brings up a menu that explains how to play, and the blue button displays the user's high scores. Sub-menus can be dismissed by clicking again anywhere on the screen.

In both level mode and endless mode, the main mechanics and controls are the same. Click on any tile on the board to select it, and press one of the keyboard's arrow keys to swap it with any of the 4 adjacent tiles. Move the tiles such that there are 3 tiles matched in a vertical or horizontal line. When 3 more or more tiles are matched, they will be cleared, and the amount of tiles cleared will be added to your score. In level mode, you must reach the target score before the time limit is reached in order to progress to the next level. In endless mode, there is no time limit and you can end whenever you want. Click the red Quit & Save button to exit the game and go back to the main menu. A pop-up will come up to show your final score, and you can click anywhere to return to the main menu.

Roles and Responsibilities of Each Team Member

Colin: Colin was responsible for implementing the Menu functionality, including the buttons, game state, and submenus. Colin also worked on tile functionality, including creating/displaying tiles, selecting tiles, and swapping tiles.

Seamus: Implemented audio, board drawing, helped with tile merging, and various bugfixes/polish

Kaylee: Kaylee was responsible for creating the hand-drawn artwork of the game's background and the Albert icon, as well as digitally converting it into pixelated assets. Kaylee also implemented the image transformations required for the intended aesthetic within the game's code.

Luna: Luna was responsible for drawing the tile icons. Luna also established the foundation for the initial board.pde and tile.pde. Also implemented logic for handling match detection, tile deletion, tile replacement, high score functionality, and Level 2.
